About Us

Going to School is a creative not-for-profit education trust that makes design-driven stories to equip millions of children and young people with the 21st Century Sustainable Entrepreneurial skills they need to be able to solve for Climate Change where they live.

On national television, online and on the ground in 3,000 Government Schools in India, Going to School's programs are designed to reach young people who are offline and enrolled in the government school system.

Design leads what we do.

We listen to what young people want.

We design large-scale programs to enable children and young people, with a special focus on girls, to complete their education and transition from school to sustainable enterprise of their choice, transforming cities to become giant sustainable places to play and becoming the Climate Change entrepreneurs we need to change everything.

From Grades 4-12, age 6-17, outside in football pitches, at school, during school hours, and for start-up sustainable entrepreneurs age 18+, Going to School programs run at scale in four states: Bihar, Maharashtra, Karnataka and Goa.

Play City, The Children's Scrappy News Service

Play City, The Children's Scrappy News Service runs on TV, online and on the ground in 1000+ government schools, designed to equip one million children with the skills they need to make their city a giant sustainable place to play and take on Climate Change.
